Project 2025

Included tools :
Microsoft Excel
Python
PostgreSQL (SQL)
Tableau

A.- Microsoft Excel ; this tools will gives us general approach of what the dataset we are going to work on has in store. Maybe create a copy where we can normalize clean data eliminate duplicates outliers, format table figure out data types how many rows and columns partition if possible all of this along with power query if we need to add columns or calculate columns organize columns.

B. – Python ; we are going to import libraries for ML get statistical insightful findings, EDA create graphs comparing across the information we have using classifiers for determine perfomance.

PostgreSQL; will be the tool for dighing specific questions so i can have an idea how to draw conclusions that are objective.

Tableau; for presenting my audience amazing and extremely understanding graphs and charts in a way you will not forget whta was the project about.
